How to edit a stories:

1. Edit the texts. To do this, you need to do the following:

Open the folder "02. Scenes" > "Scene_01" > "Edit" and change the texts in the composition "S01_Text_01", "S01_Text_02" and "S01_Text_03".

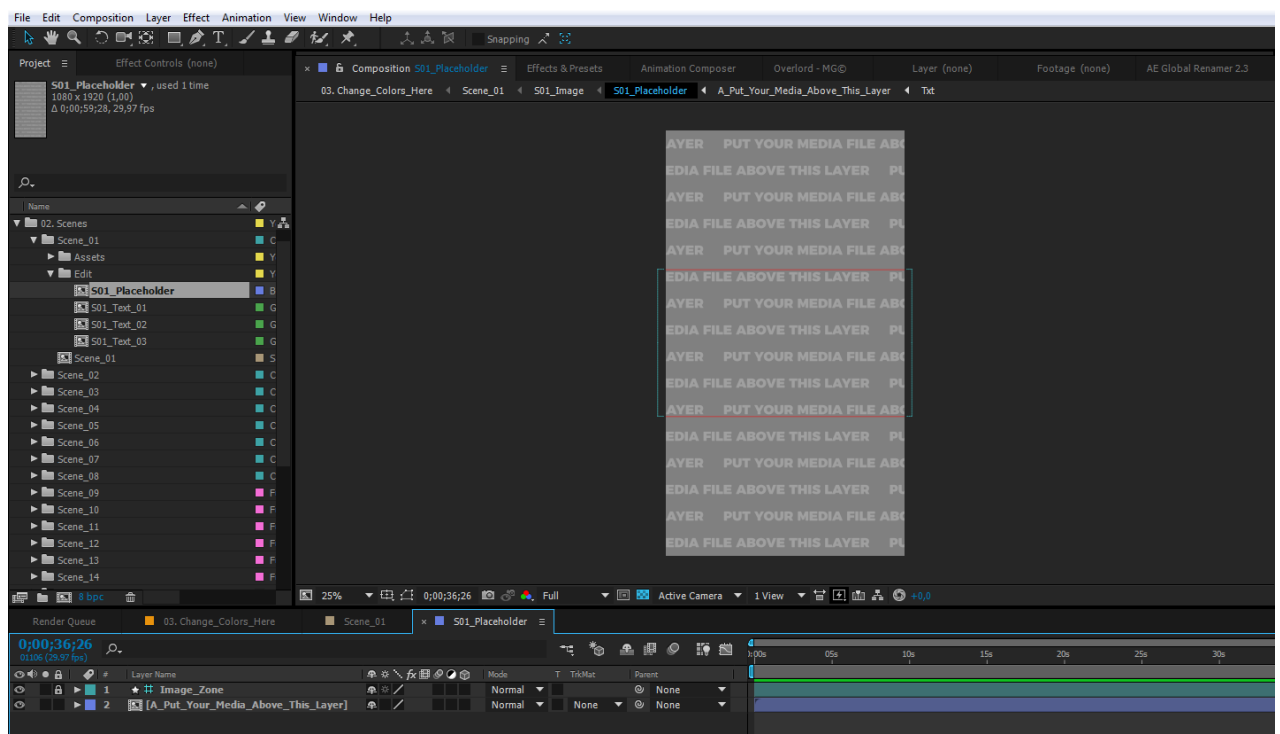

You can also open compositions with text directly from the composition Scene_01 (See screenshot below).

2. Insert your images or video files into compositions named as "Placeholder".

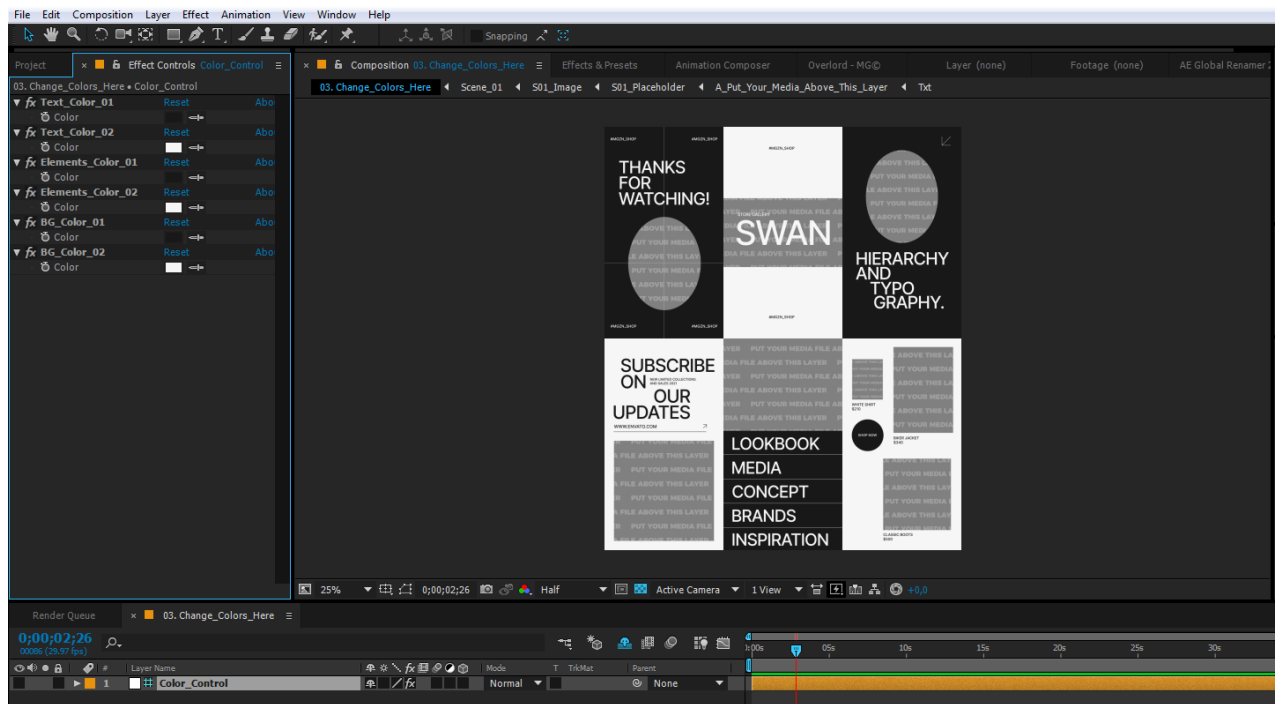

For example:

Open the folder "02. Scenes" > "Scene_01" -> "Edit" and open the compositions "S01_Placeholder", put here your video or photo (See screenshot below).

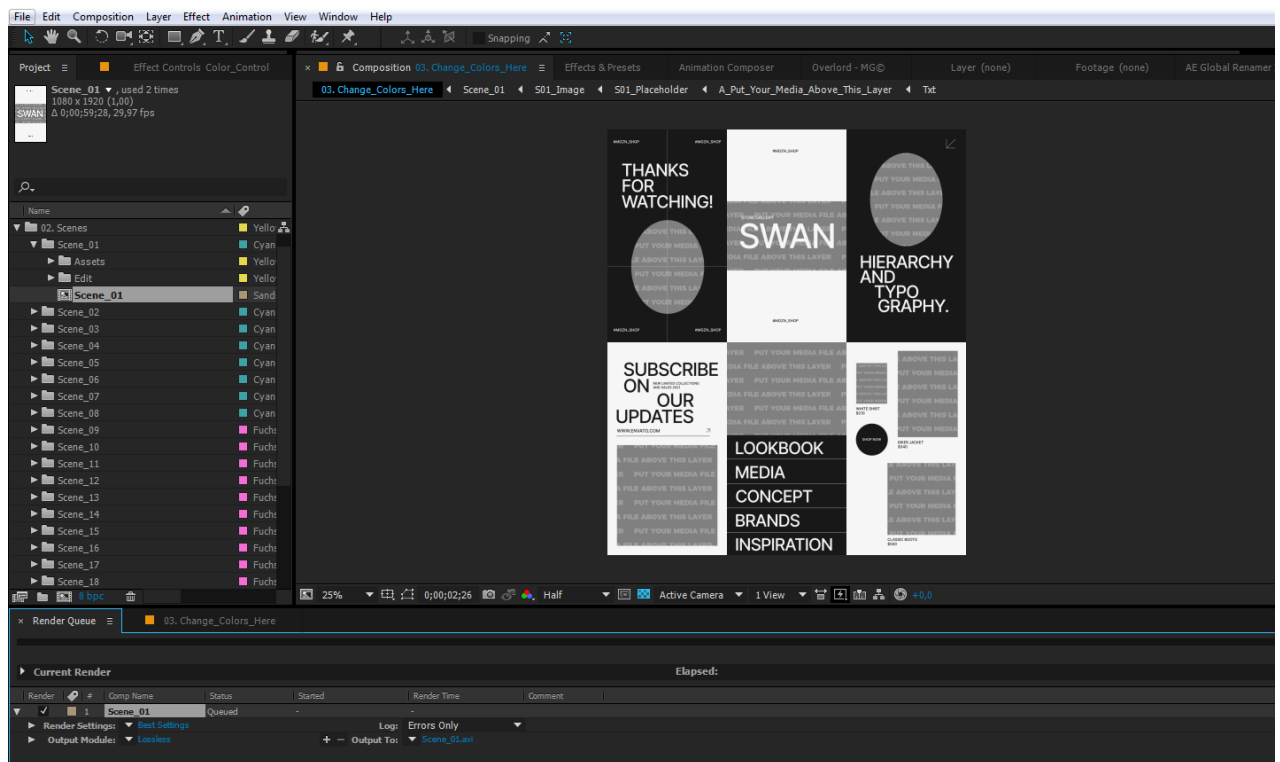

In all Scenes of the project, texts and images are edited in the same way.

3. If you want to change the colors of the project, go to the composition "03. Change_Colors_Here" and use the layer "Color_Control" (works on all compositions in the project). Before setting the color, we recommend that you insert your media files.

4. After all the changes, send the edited composition "Scene_.." to the Render Queue:
